

Districtwide Projections

5

PASA's approach to developing student enrollment projections takes into consideration past rates of growth, but relies primarily on forward-looking analyses, including:

- projected new housing occupancies;
- regeneration of existing housing with younger families;
- economic and employment trends in the local area and nationally;
- the changing distribution of students in each grade group, as well as geographically throughout the District; and
- the future effects of student regeneration, as well as student decline, in the existing housing supply.

Model for Developing Student Projections

New housing construction is the most significant contributor to new student growth in this model, based on data gathered from numerous interviews (see Chapter 2). Short term new housing is projected based on preliminary and final plats, developers' plans, and other information gathered from numerous sources. The new houses projected to be built in the first five years of this projection period represent the source of about 75% of the new students projected to be enrolled.

This model for student projections also incorporates some aspects of the recent trend of **students moving into and out of existing homes that are resold**. This year there were many built-out neighborhoods that gained students, while others lost students. Part of the model includes the projection that new petrochemical workers will rent and buy homes in the older, established neighborhoods in the District. This regeneration of existing homes with younger heads of household in some areas, while other areas are becoming more empty-nest oriented, is an important trend in Klein I.S.D. that affects enrollment at specific schools very differently. As was noted earlier in the report, existing home resales accounted for 60 total newly added students in the District for this year – without a single new home being added.

The **aging** of the existing student population contributes significantly to the projected population

growth. And, some parts of the District will grow at a faster pace due to the growth of the youngest classes, while other neighborhoods will continue to age out until the neighborhoods begin to regenerate with younger families. For each Planning Unit, the students are aged forward such that local anomalies in the population are taken into account.

Projected Student Enrollment Districtwide

As noted above, three scenarios of growth have been prepared for K.I.S.D., with the following sets of assumptions for each.

Low Growth Scenario – It is critical to consider the lowest projection scenario in making fiscal planning decisions, given the possibilities of national economic and political challenges. Under the Low Growth Scenario, the District could add 4,893 students in the first five years, and could add 5,474 students in the last five years of the projection period. Therefore, by Fall 2019, Klein I.S.D. could house 54,272 students, and by Fall 2024, 59,746 students could be enrolled under this Low Growth Scenario. Annual growth rates could range between 1.41% and 2.25% over the projection period.

A Low Growth Scenario would assume the following:

- *Elementary enrollment will increase at ~two percent per year, due to more available mortgages for younger families, altering the enrollment projections downward for future years.*
- *The slower housing starts of new homes (due partially to the lack of easily available mortgages and slightly rising interest rates) keeps the student population growth lower than expected;*
- *The unemployment rate remains at 6.2% to 6.1% in the Klein I.S.D. catchment area, and does not drop to 5% unemployment for 4 to 5 years or beyond;*
- *Household relocations remain stable, with only light interest in relocating to existing, older subdivisions to K.I.S.D.;*
- *Stock prices start dropping or remain stationery in the next 3-5 years;*
- *Consumer confidence also remains stationary or again declines, with a possible renewed recession;*
- *Increased terrorist activity within the U.S.; and*
- *Long-term Iranian, Afghan, or other geo-political war effort intensifies.*

Most Likely Growth Scenario – The Most Likely Growth projections series shows a projected increase of 7,081 students over the next five years, with an additional 8,697 students projected in the last five years of the projection period. Therefore, by Fall 2019, Klein I.S.D. could have a projected enrollment of 56,460 students and by Fall, 2024 a total of 65,157 students. Annual growth rates could range from 2.40% to 3.15%.

Over the past ten years, the District has grown by 33.6% (from 36,964 students in the Fall, 2004 to 49,379 in 2014). The Most Likely Scenario of Growth suggests a slightly smaller 31.95% increase over the next 10 years (from 49,379 in 2014 to 65,157 students in K.I.S.D. schools in 2024).

The Most-Likely Growth Scenario assumes the following:

- *The perception of the District remains the same or becomes slightly more positive relative to other surrounding districts;*
- *A greater proportion of young students move to the District – as availability of mortgages improve;*
- *After the first two years of new apartment construction (2014-2016) due to the Grand Parkway, general population apartments will increase by the equivalent of two complexes per year, and net increases, rather than declines, of students in all existing apartments will occur during the ten-year projection period;*
- *The growth of new housing (due to the Grand Parkway and the ExxonMobile complex) will accelerate new single-family housing;*
- *The single-family housing does not peak (or build-out) in this decade;*
- *The ratios of students per home will remain stable overall;*
- *Unemployment rates remain at 6.2 % to 6.1% in the Klein area over the next year, but slowly return to 5% over the next 4-5 years;*
- *Immigrants entering the Houston region will remain stable (at or below 2014 rates), thus stifling out-migration from the urban core to suburban districts;*
- *Interest rates increase by more than 2% over current levels for the next five years; and*
- *Iranian, Iraqi, Afghan, and other global concerns accelerate.*

High Growth Scenario – Under the High Growth Scenario, the District could gain 10,742 students in the first five years, and an additional 13,956 students would be expected in the last five years of the projection period. Thus, under these high growth assumptions, Klein I.S.D. could contain 60,121 students by 2019 and 74,077 students by 2024. One significant change in the High Growth Scenario is the impact of the continued low growth (for the past three years, particularly) in the

early grades. This trend of such low growth is having a big impact on the High Growth Scenario as these earlier grades age over the next ten years.

The High Growth Scenario assumes the following:

- *Student enrollment in Kindergarten and other early grades accelerate or remain at the 2012-2014 growth levels – i.e., as availability of mortgages improve, and a greater proportion of young families become buyers (see below);*
- *Older students accelerate in growth due to simply aging them forward and also due to accounting for the demand for non-entry level new homes;*
- *Student population continues to increase at a higher rate due to greater demand for both existing, older homes and for existing apartments;*
- *Student population continues to accelerate because of the demand for new housing in K.I.S.D. – dependent on better availability of mortgages, lowered mortgage rates, and the statistically higher credit scores among younger homebuyers to meet the new credit demands for a home purchase;*
- *Klein area unemployment rates begin to retreat annually – and return to 4.5% to 5% within 2-3 years;*
- *Immigration rates will again rise significantly, further encouraging further out-migration from the urban core to suburban districts like Klein I.S.D.;*
- *Interest rates decline and/pr do not rise more than 2% in the next 5 years;*
- *The U.S. has short-term deployment in Iraq and other Middle Eastern countries and no other global wars, and no increase in terrorist activity within the country.*

Number of Students in K.I.S.D. at Build-Out

Klein I.S.D. is not typical in that some multi-generational parcels may still remain undeveloped over the long-term. If some subset of these agricultural tracts do not develop this decade, then there will be a disjuncture between the demand for new homes and the availability of lots. If these parcels do not develop over the long-term, then the District could fall out of favor with new homebuyers by the time these landowners actually do make use of their tracts. It must be kept in mind that young parents often want new infrastructure, including new schools, in a newly planned suburban environment. So, as infrastructure continues to age in the Klein School District, then new homeowners, as well as developers, will be less interested in the locations of these large undeveloped parcels.

Maps are included in the second chapter that detail the developable land and the density of students in the previously developed portions of the District. As noted in Chapter 2, there are presently approximately 12.2 square miles in the District that are undeveloped (and not parks or actively in development) – out of 82.4 square miles. However, these undeveloped parcels include flood plain and tracts that will become commercial in use. As of September, 2014, there are 57.3 square miles developed, and 2 square miles is planned for development, with another 8.2 square miles already in active development – and 2.8 square miles of parkland. In sum, the district is 69% built-out, or 72% if parks are added.

Students Projected at Build-Out -- Approach One: The density map in the second chapter indicates that there are 712 students per square mile in the built-out area. It is likely that this will become about 855 students per sq. miles of the built-out (non-parkland area). At this time, a part of this current built-out area has a lower density -- such as some “rural” homes on four acres – and these will gradually disappear. Thus, using 855 students per sq. mile for all 57.3 sq. miles of developed land mass, there is a yield of 48,991 current students. This estimate is similar to the 49,379 students expected to be enrolled by the PEIMS snapshot date in October, 2014.

As a second step, of the remaining parcels, 12.2 sq. mi. are undeveloped, 8.2 sq. mi. are actively developing and 2.0 sq. mi. are planned, so that currently undeveloped tracts sum to 22.4 sq. miles. If this is then multiplied by ~70% to estimate the proportion of residential land use based on most Texas urban planners’ estimates, then there would be 15.68 square miles remaining to become dense with students. If this is then multiplied by 855, the yield is ~13,406 added students post 2014. Thus, summing 13,406 and the current enrollment of 49,379 (with the latter number weighted to equal current students for this Oct., 2014) equates to **62,785 students at build-out -- using Approach One.**

Students Projected at Build-Out -- Approach Two: Another way of looking at these build-out projections is by appending the total students this Fall to students projected via the estimated number of added housing units expected of the future, plus expected student gains and losses per current subdivision and apartment. At the PEIMS snapshot date at the end of October, 2014, there should be approximately 49,379 students in K.I.S.D. schools. Also, there should be 80,254 SF homes in 2013, based on the American Community Survey, with over 2,700 more housing units added to by Sept., 2014. Also, 14,146 single-family units are projected by PASA to be added by 2024 and another 9,771 apartments will, conservatively, be added in that same ten-year period.

With 14,146 added single-family housing units at .65 students added per new home, there should be 9,195 new students added by the Fall, 2024. Then, through build-out, another 2,877 single-family homes are projected. So, by build-out, another 1,870 students will be added (based on $2,877 * 0.65$). The ratio of 0.65 was used rather than the current ratio of 0.62 because many of the older homes will increase in density of students.

For apartment units, there will be 9,771 added by 2024 and another 1,515 new units (very conservatively) added through build-out. If an estimate of .40 students is added per new unit, there will be 3,908 added students in multi-family units by the Fall, 2024. (And, from 2024 until build-out, there should be more than the 1,515 multi-family units described above, since this figure excludes many future multi-family units that are yet not known.) Conservatively, using

1,515 MF units added from 2024 to build-out, multiplied by a ratio of 0.40 students per unit, the yield would be another 606 students added in apartments post 2024.

In sum, using a ratio of 0.65 students for all SF homes – both existing and new homes -- and 0.40 students as an average for all non-retiree MF units until build-out, then there will be approximately **13,103 added students by 2024, and another 2,476 from 2024 to Build-Out, for a total of 15,579 students added to the Klein School District.** Adding this 15,579 to the current student count sums to **approximately 64,958 total projected Klein I.S.D. students at build-out using Approach Two.**

Both of these approaches -- Approach One and Approach Two -- are actually lower than the “Most-Likely Projection Series” of 65,157 by Oct., 2024. This projection series includes a set of estimates about future apartments that are not geo-referenced—in order to allow for that generalized demand for multi-family units which occurs as a school district matures.

Projected Resident Students by Planning Unit

Presented in this chapter is a chart showing the number of students projected to live in each Planning Unit each year under the Most-Likely Growth Scenario. This can be utilized by the District in assessing and making decisions about future utilization of each campus.

The Importance of Transfers

It is important to remember that these student projections include only the projected resident students, exclusive of inter- and intra-District transfers. All transfers would also need to be analyzed when assessing facility utilization (refer to Chapter 6) including both voluntary transfers for personal reasons, as well as transfers for special programs. Transfers will change from year to year, and are thus useful for analysis for only a short period.
